

# Dredging Equipment Engineer and Supplier

As per 1 February 2009, Holland Marine Technologies is active on the international dredging market as a newly established dredge equipment engineering and supply company. HollandMT's focus is on becoming a world market leader in engineering and supply of dredge parts and systems by making use of innovative design, cost effective manufacturing and outsourcing solutions, state of the art project management and product support services.

HollandMT manages its engineering and product support services through its head office in Woerden (The Netherlands), whereas various global partnerships are in place for manufacturing and fabrication of dredge parts and systems. To enhance the outsourcing activities with foundries, machine shops and fabrication yards, HollandMT has also

opened a branch office in China. The main task of the branch office is controlling and securing HollandMT's stringent quality standards. As such, HollandMT will provide high quality products and services at a competitive price level.

HollandMT's experienced team of engineers and project managers are eager to meet equipment requirements from global dredging contractors. HollandMT's management has decades of solid experience in the dredge manufacturing industry, previously fulfilling various senior management and board positions at IHC Merwede and Vosta LMG.
