

# E R Offshore Extends Veripos Positioning Contract

Veripos (UK) has been awarded a two-year extension on its GNSS positioning contract with E R Offshore GmbH, the subsidiary of the Hamburg-based shipping organisation E R Schiffahrt. The extended contract is to support ER Offshore's fleet of eleven platform supply vessels (PSVs) and two anchor handling tug supply vessels (AHTS).

Under the new arrangement, Veripos will continue to supply nine of E R Offshore's PSVs with its Standard high-precision augmentation service providing metre-level accuracies; a further two vessels will utilise its latest Standard<sup>2</sup> service which offers an additional Glonass capability. E R Offshore's two 86-metre AHTS craft, *ER Luisa* and *ER Vittoria*, will also utilise the Standard<sup>2</sup> service.

All 13 E R Offshore vessels, which are maintained and chartered for worldwide operations, are already permanently equipped with configurable Veripos LD2 integrated mobile units for generating any proprietary positioning solutions in addition to outputting data and measurements to external processing or quality control software.
