

Echoscope Sonar for Dredging International

Unique Maritime Group of UAE has recently delivered two Echoscope 3D sonar to DI-MEDCO, a joint venture between Dredging International and Middle East Dredging Company, for the planned shore protection and harbour construction works of two artificial islands.

The Echoscope, produced by CodaOctopus Products, is a sonar capable of producing real-time 3D imagery, enabling the operators of visualise underwater activity in 3D even in zero-visibility conditions. This latest delivery adds to Dredging International's existing pool of Echoscope systems, further enabling the company to increase the efficiency of its operations.
