

# Echoscope XD Launch and Demo

At Coda Octopus' stand Q9 at Ocean Business 2017 visitors find an addition to the real-time 3D sonar range, the Echoscope XD. The Echoscope XD sees a wide-angle 90° x 44° 240kHz option added to the Echoscope. This new variant of sonar has multiple projectors and allows a wider field of view.

There also are interactive presentations on the stand, using live data from recent projects highlighting the capabilities of our software range. This will include the latest Version 7 release of CodaOctopus® Underwater Survey Explorer Software.

## On-water Echoscope XD Demonstration

On Wednesday 5 April, Coda Octopus is to host an on-water Echoscope XD demonstration of its capabilities including the latest version of the operating software Underwater Survey Explorer (USE V7) and the demonstration will include on-water survey of the surrounding seabed area in real-time. This is a chance to experience the real-time 3D Echoscope XD sonar right at the Exhibition Centre.

We are excited to welcome you to this Demonstration, interested delegates are requested to [register to attend](#).
