

# Economic Surveying in Middle-East and Siberia

No Limit Ships has received an order for a No Limit Professional from MRTS, Russia, for surveys in and around the Caspian Sea. The vessel is to be delivered in May 2012. In the end of last year, deliveries have been taking place of several vessels with jobs in the Middle-East. The No Limit Professional vessels facilitate surveying with a multi-beam echosounder at a high speed, which is economically attractive as a big area can be mapped in a short time.

In the summer of 2010, a No Limit 1640 Professional has been transported to Qatar to survey in the Persian Sea for the Qatari government. Later, a vessel of the same series, named Geo Connection, has been handed over to GeoPlus (Netherlands) which is to survey in Kuwait until the end of 2011 for an international dredging company.

Two No No Limit 1640 Professionals have been delivered to dredging company Jan de Nul, Belgium, to map the sea floor in Dubai (UAE) with precision, by minimal staff and at high speed.

The No Limit Professional vessels attain a high survey speed using a multi-beam echosounder. This facilitates efficient surveys. Other characteristics are a reduced draft and the ability to operate in extreme weather conditions.
