

On-water Demos of EdgeTech 6205 Multi-phase Echosounder

EdgeTech is conducting on-water demonstrations of the EdgeTech 6205 multi-phase echosounder (MPES) continuously throughout Ocean Business 2017. The system provides 200-degree IHO-quality bathymetric coverage and co-registered simultaneous dual-frequency sidescan sonar data.

EdgeTech's 6205 next-generation technology increases efficiency and safety for traditional shallow-water multibeam users. Demonstrations will be conducted on board the *New Life II*. There is space available for some of the remaining demos. Interested delegates can register at the EdgeTech booth (B9) to join. Each outing takes approximately one hour.

Wednesday 5 April: 09:30-11:00-12:30-14:00-15:30

Thursday 6 April: 09:30-11:00-12:30-14:00-15:30
