

Expanded C-Product Range

C-Products reports successful C-Boom LVB sales this year to a number of world-wide geological institutes, including the USGS in Florida, KIGAM in Korea and, most recently, the Hungarian Geological Survey.

In the lead up to Oceanology in March 2004, C-Products will be focusing on further promoting the extensive C-View software range, which includes seismic acquisition, data processing and now hydro- graphic elements.

The company has also signed an agreement with C&C Technologies in the USA, the UK/Ireland C-Nav GcGPS dealership agreement, following on those accorded by the offshore survey equipment manufacturers, Tritech International Ltd in Aberdeen and Ocean Scientific International in Petersfield.
