

# Express ADCP Configuration For Basic Current Profiling Needs

Teledyne RD Instruments' Marine Measurements has developed an Express Acoustic Doppler Current Profiler (ADCP) Configuration, designed to offer the performance benefits of Broadband processing, in a basic package priced nearly 30% below Teledyne RDI's™ Workhorse ADCPs. The Express ADCP configuration answers to the needs of customers whose applications involve the collection of only basic current profile measurements at fixed locations. This configuration offers an entry-level option for those with limited needs and/or budgets, with applications that demand Teledyne RDI's Broadband performance and data reliability. The Express can also be upgraded to the full spectrum of Workhorse capabilities without the need to return the instrument to the factory.
