

Featuring in Hydro International's latest issue: the Biggest Arctic Expedition of All Time

In the latest edition of Hydro International, there is a featured article on the MOSAiC expedition. On 20 September 2019, the German research icebreaker *Polarstern* left the harbour of Tromsø, Norway, for what could be the biggest Arctic research expedition of all time. Once she reaches the destination, the ship and her crew will become trapped in the ice and spend an entire year drifting through the Arctic Ocean. Read the full story now in print and soon online.

More featured articles in the latest issue of Hydro International:

- an interview with the New Director-General of the French Hydrographic Office
- a case study on mapping submarine groundwater discharge with thermal infrared imaging
- a practical story about using USVs for bathymetric data imaging
- a report on the first unmanned system to circumnavigate Antarctica
- a story about how Dutch surveyors found the wreckage of a World War I submarine

The full edition and all the stories will be published online soon.
