

Finland Selects Fansweep30 Coastal System

ATLAS Hydrographic has received an order for the new FANSWEEP 30 COASTAL multi-beam echosounder from the Finnish Maritime Administration in Helsinki.

The FANSWEEP 30 COASTAL system will be installed onboard the Administration's survey vessel, Airisto, together with peripheral sensors integrated using the ATLAS Integrated Survey Sensor System (ATLAS ISSS).

System management, planning and online operation will come from the ATLAS Hydrographic Processing Suite (ATLAS HPS) which provides real time tide/SVP corrected 3D bathymetry, water column display and continuous data quality management.
