

First Appearance New Octopus 760

Octopus 760, the latest geophysical acquisition package from the marine technology company, CodaOctopus, is now available. This dual-simultaneous side-scan and sub-bottom profiler acquisition system builds on the reputation of the Octopus 360 sub-bottom processor and the Octopus 460 sonar acquisition system. The new 760 brings the Octopus geophysical acquisition range right up to date whilst retaining simplicity of operation and rugged design. The 760 takes the Octopus design philosophy which focuses on ease of use and adds the latest hardware, software and technology, guaranteeing compatibility with other systems and peripherals. It adopts the latest features and familiarity of Windows XP in one instrument packet.
