

FMS Names Veripos as Key Supplier of Offshore Positioning Solutions

[First Marine Solutions](#) (FMS) has made a significant investment to strengthen its new survey department through a key supplier partnership with Veripos, part of Hexagon, to achieve a complete and robust offshore positioning solution. With the purchase of [high-precision LD8 GNSS receivers](#), [Quantum software](#) and a subscription to Veripos' [PPP correction services](#), FMS can begin offering decimetre-level accuracy for offshore hydrographic survey, positioning and construction operations.

FMS' selection of Veripos as its key supplier of GNSS positioning and correction services recognizes Veripos' complete positioning offerings. Veripos delivers positioning through its GNSS receivers, antennas and GNSS+INS technology, with complete redundancy in corrections from Veripos' own 80+ station reference network. Veripos technology and

services provide a complete positioning solution supporting offshore construction, mooring, hydrographic survey and other offshore energy applications.

"Our investment in Veripos positioning products and services bolsters First Marine Solutions' in-house offerings," said FMS survey & positioning manager Carl Lafferty. "Choosing Veripos as our key supplier of GNSS positioning receivers and correction services firmly establishes FMS as a leading turnkey supplier in the offshore energy market."

With its investment in precise positioning, FMS extends its positioning solutions into its work in offshore survey as well as temporary and permanent mooring solutions for floating offshore units to support the emerging renewables market.
