

Fugro Awarded Ichthys Project Survey Work

Fugro Spatial Solutions, Australia, has been awarded a dimensional control survey subcontract by JKC Australia LNG, as part of the construction of the Ichthys Project Onshore LNG Facilities, near Darwin, Australia. This contract will run until the end of 2015, with Fugro's specialist surveyors supplying high-precision survey services to the project team for the installation and hook-up of the LNG plant modules by accurately measuring the interface points.

Modern Dimensional Control combines 3-dimensional mathematical modelling with surveyed measurements providing the ability to analyse or compare objects. Originating in the offshore industry, it is now used by our surveyors in the engineering, manufacturing, mining, marine, aeronautical and automotive industries.
