

Fugro Marinestar to Sponsor Hydrographic Data Acquisition & Processing Weeks

[Fugro Marinestar](#), provider of a range of GNSS positioning services worldwide tailored for the dredging and marine construction, navy and hydrographic, wind farm and oceanographic research sectors, has become official sponsor of the Hydrographic Data Acquisition & Processing Weeks organized by *Hydro International*. The online event will consist of a dedicated web page, extra

newsletters and the bumper-packed November-December issue of *Hydro International*, the global magazine for the hydrography industry.

During the [Hydrographic Data Acquisition & Processing Weeks](#) (9 November – 21 December), which will be supported by an abundance of new articles, columns, Q&As, videos and other new content, the *Hydro International* community will receive a major update on the integration of survey sensors and software. Through articles, columns and case studies, we will zoom in on the newest bathymetric innovations, including innovations in survey systems, innovations in software (both recording and processing), and new and sometimes surprising applications when it comes to the use of data. This makes it the ideal time for suppliers and service providers to put their relevant solutions in the spotlight.

For more details of how to ensure your company takes centre stage during the [Hydrographic Data Acquisition & Processing Weeks](#), contact [Jurjen Visser](#) or [Feline van Hettema](#). And if you have any suggestions about interesting topics for articles or columns, please send them to [Wim van Wegen](#).
