

# Fugro signs Enterprise Licensing Agreement with Teledyne CARIS

A Fugro survey of Battery Point, Akutan Island, Alaska in HIPS

Teledyne CARIS has entered into an Enterprise Licensing Agreement with Fugro. This agreement will enable Fugro worldwide on-demand access to CARIS software, specifically HIPS and SIPS for the purposes of hydrographic data processing and Bathy DataBase for data management.

The agreement will also provide Fugro with market leading technical support and will lay the groundwork for greater collaboration for research and development initiatives going forward.

According to Teledyne CARIS general manager and vice president Doug Lockhart, this agreement builds on a history of collaboration and paves the way for new developments in

both companies' common interest.
