

# Gemini NBI Sonar Added to STR Rental Pool

Tritech has sold 4 Gemini NBI systems to Subsea Technology and Rentals (STR), Great Yarmouth, UK. This is a significant purchase for STR, who recently rebranded to reinforce its position as the provider for high-technology subsea equipment. The Gemini NBI offers a narrow vertical beam at 130Å° swath for applications where precision in target detection and monitoring of a position is required. The Gemini NBI offers the same high refresh rate currently offered by the Gemini range of sonar.

The purchase was driven by customer demand and [STR](#)'s commitment to providing high-quality, new and innovative rental products to the buoyant subsea market.

The company already offers a comprehensive suite of Tritech sensors and sonar for rental including sonar, profilers and bathymetric systems. This latest purchase will enhance its pool of subsea equipment, to support excavating and dredging companies' requests for high-specification multibeam sonar.
