Geo-matching.com at Ocean Business

Hydro International is presenting Geo-matching.com, the product comparison website for professional hardware and software products, to the hydrographic sector at this year's Ocean Business event. This new website enables users to compare products before they buy, without having to trawl through the various manufacturers' websites.

The website brings together the highly valued *Hydro International* and *GIM International* product surveys all in one place and just some of the categories featured include GNSS Receivers, Inertial Navigation Systems, ADCP, Autonomous Underwater Vehicles (AUVs), Remotely Operated Vehicles (ROVs), Side Scan Sonar, and Multibeam Echosounders.

Geo-matching.com (www.geo-matching.com) is the independent product comparison website featuring detailed spec-based comparisons and user reviews for more than 500 products. The website leads users through the maze of specifications and gives them the opportunity to compare products from different suppliers, including read other professionals' reviews, in order to reach a balanced judgment before buying.
