

# GEO.xyz Expanding Activities

GEO.xyz, headquartered in Belgium, has been growing steadily in recent years and now employs upwards of 50 staff. GEO.xyz owns and operates its own fleet of vessels equipped with modern survey equipment. In 2009, the subsidiary in France was established and in 2010 Stema-Survey-Services BV (The Netherlands) joined the GEO.xyz family of companies. Stema-Survey-Services BV has been operating as GEO.xyz BV since 1st January 2012. Meanwhile, GEO.xyz Ltd (UK) has recently been established to enhance the UK and group activities.

GEO.xyz continues to invest in bespoke vessels, precision equipment and skilled personnel. Early in 2012 the company will take delivery of two new build vessels - *Geosurveyor VIII* and *Geosurveyor IX*, bringing the total to twelve survey/support vessels (image: *Geo Ocean I*).

In December 2011, Mr. Richard Hill joined GEO.xyz as senior consultant in the UK. With his 20 years of survey experience, he is an appreciated addition to the GEO.xyz team.

GEO.xyz is an independent geospatial and geotechnical engineering company providing bespoke solutions to the renewable energy, dredging and marine construction sectors and to local authorities or government agencies.
