

# Geophysical Product Line Transfer

Teledyne Odom Hydrographic is currently receiving the transfer of the geophysical product line from its sister company Teledyne Benthos. This transfer will include Chirp III Sub Bottom Profiler, the new SIS-1725 sidescan and the C3D Underwater Imaging System.

All new orders for Chirp III and SIS-1725 products will need to be placed with Teledyne Odom. Existing users of the system are assured of continued support. All systems sold by Benthos and still under factory warranty will be supported by Benthos. Odom and Benthos will collaborate to support legacy customers in need of spare parts and repairs.

Odom feels that this transition will strengthen its ability to provide an entire survey suite to its customers, and in the future provide first-class support to existing Benthos customers.
