

# Gippsland 2D Infill Survey Completed

MV Duke, owned and operated by Gardline CGG Pte Ltd, Australia, completed the Gippsland 2D Infill survey for Geoscience Australia on Friday 24 April 2015. The project was completed on time, within budget and without any incidents, despite encountering some challenging sea conditions at times.

The team worked in a safe and efficient manner to acquire the full 2D infill programme. Thanks to the versatility of *Duke*, additional datasets such as multibeam bathymetry, water column data, seabed backscatter and sub-bottom profiling data were acquired within the seismic acquisition budget. The combination of these additional datasets and conventional 2D seismic will allow for a better understanding of processes in the area.
