

GIS Software Download Finder

From now on, GIM International is your guide for GIS software. On this website, you will find a guide to GIS software that is available to download for free. Follow the link 'Downloads' in the left-hand navigation bar of the website.

Mostly, the software is leading to free viewers, trial versions or open-source software. Have a look at the guide yourself and see what software is available.

As software is developing fast and we - however we tried hard to find the right applications - realise we did not yet include all software available. Please submit your suggestions and comments to our content manager, Joost Boers, e-mail joost.boers@geomares.nl, and contribute to improve this section!

[Go to the Download section](#) of GIM International.
