

HIPS and SIPS 9.0 and Bathy DataBASE 4.1 Launched

CARIS has launched new releases of its hydrographic data processing and bathymetric data management and analysis solutions. The latest releases of HIPS and SIPS 9.0 and Bathy DataBASE 4.1 feature significant enhancements, as well as providing streamlined connectivity and smart utilisation of shared functionality.

The release of HIPS and SIPS 9.0 brings the leading hydrographic data processing system into the next generation. The latest version has been redesigned to enhance the user experience by creating more intuitive workflows through a new interface. This release also provides HIPS and SIPS users with powerful terrain manipulation and analysis capabilities that previously only existed in BASE Editor.

The release of Bathy DataBASE 4.1 includes performance improvements, enhanced support for BAG and IHO S-102 data and powerful extensibility through custom data handling and creation tools.
