

# Hong Kong Maps Tide in Real Time

The Hydrographic Office of the Marine Department in Hong Kong has launched a real-time tide map. It displays the real-time tides at eleven locations along the Hong Kong shore, from a variety of observatories. These are managed by the Hydrographic Office, the Hong Kong Observatory and the Airport Authority.

The graphs display the measured tide in real time and the predicted tide height for a 48-hour time frame. It also is possible to display the data as a table for each measure point.

The [data is accessible online](https://www.hydro-international.com/content/news/hong-kong-maps-tide-in-real-time).
