

Hydro-Lek Accelerates Repair Services

Hydro-Lek have announced an increase in stock holding of their full range of ROV tooling across the board to meet customers'™ requirements for fast and efficient customer service with reduced delivery times. Higher stock levels have also enabled the company to offer a 2-week turnaround for all tooling repairs. Repairs under warranty are completed within 2 weeks of receipt of product and out of warranty repairs are shipped back within two weeks of customers'™ approval of repair quotation.

Graham Hart, heading up the repair service, expects that the service can be delivered in some cases even sooner than 10 working days, depending on the complexity.

Hydro-Lek is a leading supplier of remote handling systems for the subsea, nuclear and defence industries. The company was acquired by Saab Seaeye in 2013 and produces a range of hydraulic intervention tooling from simple hydraulic components to fully integrated telemetry-controlled remote manipulator systems for integration onto ROV's and remote access platforms worldwide.
