

Hydro Suite 120 for GeoDynamics

GeoDynamics has acquired a TEI HydroSuite 120 multibeam system from Triton Elics International (TEI). The HydroSuite includes all the tools needed for a complete hydrographic survey. The system will use the Isis data acquisition software with BathyRT, providing the operator with real-time DTMs to maintain high quality control over the data. Multibeam and sidescan data analysis will be performed in the TEI GIS software DelphMap. The HydroSuite system includes Simrad EM3000 series sonar, a TSS Mahrs sensor and an Odom sound velocity probe. It has been completely field tested and will be integrated on board the client's vessel in Morehead City, NC. Field training for five days will be provided to ensure complete knowledge of the TEI HydroSuite software and hardware.
