

Hydrographic Measurements 2.0 Seminar to Establish Multi-sensor Data Capture Strategy

On 5 December 2013, the Maritime Access division (of the Department of Mobility and Public Works) and IWT, the Flemish Agency of Innovation, are to organise a conference called HYDROGRAPHY 2.0 in Antwerp, Belgium. During this one-day event, the results of the market consultation that was held will be outlined as well as the intended procurement of the pilot project ahead, which will be based upon a multi-sensor data capture strategy for bathymetric measurements.

Participants are requested to register for [the conference Hydrography 2.0](#) before 1 December 2013 [via email](#).

Flanders has initiated a market consultation to investigate the current state of the next generation of bathymetric measurement technology as well as the innovation opportunities in realising continuous, accurate and reliable hydrographic measurements over a huge area and at a reasonable cost.
