

# Hydroserv Buy AC-Rov

HydroServ have purchased an AC-ROV underwater inspection system from manufacturer Ac-Cess Co. HydroServ is a multi-disciplinary marine organisation supplying a variety of construction, engineering, vessel and consultancy services to the Marine sector in Ireland the UK and Europe.

With extensive near-shore and offshore experience in marine operations; vessel charter & management; marine construction and underwater operations including ROV inspection, HydroServ are well placed to gauge the benefits of the micro ROV and its unique characteristics. The unit can be in the water in 2 minutes, after the deployment the system is stowed away in one hand carry case – it's easy, thus facilitating quick inspections. Through its size, it gets a camera onto targets that were previously invisible to the company.
