

ILMF2004 Registration

The International LIDAR Mapping Forum is pleased to announce that registrations are now being accepted for the ILMF2004 meeting. The two-day meeting will feature an expanded programme that, in addition to aerial LIDAR mapping, will also include dedicated sessions addressing airborne LIDAR bathymetry, 3D laser scanning (ground LIDAR) and software applications. Several workshops will also be available to registrants. The popular icebreaker reception and a complimentary continental breakfast and lunch will offer attendees the opportunity to network with others in the LIDAR mapping industry. The preliminary programme may be found on the ILMF Web-site.
