

# Increased AML SV Sensors Sales

OSIL have reported a marked increase in sales across the range of AML (Applied Microsystems Ltd.) Sound Velocity instruments in response to a growing need within the industry. Specifically, OSIL have noted substantial increases in sales of the AML CTD SV Sensor, the AML SV Smart Sensor, and the Micro SV Sensor.

OSIL Director, Richard Williams, explains why AML has fast become the clear choice for many, "Organisations need highly dependable sound velocity instruments in the field with the ability to work at much greater ocean depths, without the need for frequent calibration."
