

Infrastructure Survey in Turkey

Fugro has been awarded a contract by the joint venture NÖMAYG (NUROL, ZALTIN, MAKYOL, ASTALDI, YÖKSEL and GÖZAY) in Turkey for site investigations and consultancy work for a major infrastructure project on the Izmit Bay Bridge in Turkey. The project, to start immediately, has a value of EUR11.9m and will extend into the third quarter of 2010.

The contract involves onshore and offshore geophysics, drilling for samples, seismic studies, geological mapping, geotechnical laboratory testing and earthquake engineering. With these specialised services Fugro will assist NÖMAYG, who has won the concession to design, build and operate the 421-kilometre Bursa-Balikesir-Izmir Highway Project in Turkey. The project includes the Izmit Bay crossing which will have a suspension- bridge that is located in the North Anatolian Fault zone, one of the world's most active plate boundaries.
