

INS interest Leads at ‘Life of Field’ Workshop

Sonardyne’s recent ‘Life of Field’ two day workshop was well attended by over 40 industry professionals, ranging from major oil representatives through to vessel Masters. Held at the 4 Points Sheraton Hotel, Houston, USA, day 1 focused on acoustic positioning techniques whilst day 2 looked at advances in Metrology, Autonomous Monitoring and Inertial Navigation Systems (INS).

With sessions delivered by members of Sonardyne’s Survey Support Group (SSG), attendees debated achievable accuracies in acoustic positioning and how to optimise equipment selection for subsea positioning tasks in the field development phase. The second day’s presentation of inertial and autonomous monitoring technologies generated particularly high levels of interest, resulting in an impromptu presentation discussion of real world applications with case studies and data gathered from projects in the Gulf of Mexico.
