

Interactive Webinars

Teledyne RD Instruments (RDI) is launching free weekly online webinars detailing ADCP (Acoustic Doppler Current Profiler) and DVL (Doppler Velocity Log) product and application training. Each one-hour course is fully interactive and includes online content accompanied by real-time communication between Teledyne RDI's instructors and the course attendees.

The one-hour courses have been designed to cover a wide array of topics including Teledyne RDI's hardware, software, data analysis, and field applications; allowing users to continually increase their product and application knowledge, without leaving their office. The courses are appropriate for all levels of ADCP/DVL users.

Teledyne RDI University courses are hosted every Thursday at 09.00 Pacific Time (17.00 GMT). A full course listing and online registration is available at the website below. If you're unable to attend a topic of interest, register for the course, and you'll receive a link to the recorded session to view at your convenience.
