

iXBlue Expands Operations in Brazil

iXBlue, headquartered in France, has increased support and product availability in Brazil. This is in line with the company's strategic plans to accelerate sustainable long-term growth in this important and expanding market. Expanding the iXBlue dedicated support team in Rio de Janeiro sharpens iXBlue's focus on tailored local services for product adoption, training, deployment services and timely repair activities.

iXBlue navigation and positioning products are used by survey, EPC, and other offshore national and international organisations involved in Brazil offshore projects. This includes Petrobras projects in Saipinoa/Guará-Lula pre-salt discoveries of Santos Basin.

Having access to a large local stock of inertial and acoustic products, iXBlue customers can save time and money during the life cycle of their projects.

iXBlue serves thousands of international customers in more than 30 countries through a 500-strong dedicated professional staff, including global sales, 24/7 support, training services and numerous international offices.
