

# J2 Subsea Opens Subsea Tooling Facility in Houston

J2 Subsea has opened a new subsea tooling facility at sister Acteon company, Seatronicsâ€™™, subsea electronics location in Houston. North American customers can now access a comprehensive suite of subsea equipment for diver and remotely operated vehicle (ROV) applications. The new facility includes a workshop for tool preparation, servicing and support. It will provide torque tools, analysers, cutters, manipulators, intensifier panels, grinders, dirty work packs, jetters and more.

The new facility marks the next stage in J2 Subsea's global expansion plan. According to John Walker, J2 Subsea director, the company already operates from other Seatronics facilities and the new Houston location supports the company's aim of offering everything on the ROV globally.

The facility is located on 1319 W. Sam Houston Pkwy N., Suite 150, Houston, USA.
