

James Hailstones Joins ASV

James Hailstones has joined ASV's team as the company expands its reach into the Offshore Energy market. Based in Aberdeen (UK), James will lead industry engagement as more firms look to introduce Autonomous Surface Vehicles into their operations. The newly established Aberdeen base is in addition to ASV's existing sales offices in Houston, Texas and Portsmouth, UK.

James is an electronics engineer with over 30 years experience in the offshore survey industry, operating in the oil/gas, government, communications and renewable sectors. After spending 15 years working in an offshore environment on a global basis, James moved into various managerial positions working both in the USA and UK over the last 15 years.

Following successful operations in the Gulf of Mexico, Irish Sea and various locations off the UK, ASV has begun expanding its C-Worker fleet of ASVs. The multi-purpose work class vehicles have the ability to integrate multiple offshore payloads for a variety of tasks including surveying and monitoring.
