

L3 OceanServer Awarded General Services Administration Schedule Contract

L3 OceanServer has been granted a five-year General Services Administration (GSA) schedule for its Iver3 Unmanned Undersea Vehicles (UUVs). This GSA schedule gives registered government agencies a simple path to procure Iver3 UUVs using pre-established pricing and terms & conditions. A contract was awarded for two Iver3 UUVs and associated training, effective 19 December 2018.

“L3 OceanServer is pleased to receive this GSA schedule and contract award. GSA schedules provide shorter procurement cycles for federal purchases to streamline ordering processes,” said Daryl Slocum, General Manager of L3 OceanServer. “This award will allow us to develop existing customer relationships and build new ones.”

Government agencies

The Iver UUV is a commercial-off-the-shelf product built with warfighter-driven attributes. It features longer runtimes and precise navigational accuracy, enabling long ingress/egress missions that provide greater standoff distances and increased mission safety. L3 OceanServer has a history of working with various government agencies, including the United States Marine Corps and the United States Navy, making this GSA contract a logical next step in business development.

L3 OceanServer is part of the Integrated Maritime Systems sector within L3's Communications & Networked Systems business segment. Since its inception in 2003, L3 OceanServer has sold more than 300 AUVs worldwide, providing highly capable solutions to a broad array of military, commercial and international customers.
