

LOG_aLevel for Flinders Ports Australia

The German company General Acoustics GmbH has received an order for the tide and wave measuring system LOG_aLevel from Australia. The purchaser of the gauge is Flinders Ports South Australia (www.flindersports.com.au) via HydroSurvey Australia (www.hydrosurvey.com.au). It will be mounted approximately 10nm from the port of Adelaide. It is being installed for the measurement of waves (H/3) and water level (tide) to aid in the safe passage of deep draught vessels that enter or depart the Port of Adelaide.
