

# Lunch & Learn Events on Underwater Technology

In March 2013, MacArtney Pacific Northwest and West Coast Operations, USA, will be opening the doors to a couple of ambitious 'Lunch and Learn' knowledge-sharing and networking events. At these events, MacArtney customers, along with other interested parties, are invited to share an exquisite lunch while learning, sharing knowledge and networking with industry professionals within the realm of underwater technology.

The 'Lunch and Learn' events will take place in San Diego on 19 March and Seattle on 21 March.

MacArtney's technical director, Steen Worsøe, will be flown in from the MacArtney Group headquarters in Denmark to give a presentation on 'Cathodic Delamination' - the invisible 'killer' of rubber-moulded connectors, outlining how one can identify, understand and prevent this detrimental phenomenon.

According to MacArtney Inc.'s president, Lars Hansen, being close to the customer is the overarching incentive for placing MacArtney offices in every coastal corner of the United States. Furthermore, Lars Hansen is very pleased with the new setup and is looking forward to welcoming interested parties to experience the potential of local access to global underwater technology at the 'Lunch and Learn' events.
