

Magnetic System Survey

Innovatum International Ltd has carried out a beach survey of the Bacton-to-Zeebrugge Gas Interconnector pipeline for Gardline Environmental Ltd. Despite being buried 5 metres deep the pipeline was successfully located and surveyed on the beach at Zeebrugge (Belgium). The survey was carried out using Innovatum Ultra equipment mounted on a survey "barrow"™ and, carried out to the low water mark, took less than two hours to complete. Innovatum magnetising and tracking technology can be applied to virtually all submarine cables and pipelines.
