

Marine Electronics Repair Capabilities Upgraded

Northrop Grumman Corporation (VA, USA) its Sperry Marine North American Support Center in Harvey (LA, USA) is now authorised to perform Level III repair and calibration of Hatteland flat-screen monitors for electronic chart display and information systems (ECDIS).

The Level III certification means that the Sperry Marine facility can now perform ECDIS calibration requirements mandated by the International Maritime Organization (IMO) for the Hatteland products. The Hatteland flat-screen LCD monitors are used in Sperry Marine's new-generation VisionMaster FT series of radars, ECDIS and TotalWatch multi-function workstations.

The repair activity is defined and supported by a formal service agreement between Sperry Marine and Hatteland Display A/S of Norway. Sperry Marine's support center is certified by Hatteland to provide warranty and third-party repairs for these flat-screen display products.
