

Marisoft Inspection Package Sales

MariSoft, Egypt, has made integrated software sales to subsea cable specialists, Offshore Marine Management's (OMM) survey services section. OMM has utilised Inspector and HydroChart on all their projects to date including the recent Barrow and Burbo offshore wind farm scopes of work and also for the Transpower HVAC cable installation and associated survey, WROV and trenching operations due to start in August 2010.

The GIS suite is used by OMM in-house for project planning and management and cable route associated desk studies, but is increasingly being used for client project deliverables. MariSoft also provide OMM with programming, CAD, data processing and digital video review personnel and GIS/ population support services.

MariSoft were also commissioned by OMM to undertake two be-spoke software solutions, currently being rolled out to service offshore wind farm marine coordination and live operations and data/ project management and marine security/ anti-piracy management.
