

MB1 Multi-beam Systems Sold to Brazil

As a result of a successful week of on-water demonstrations to over 70 interested parties in Rio de Janeiro, Brazil, Teledyne Odom Hydrographic has sold and delivered the first MB1 multi-beam echo sounders to Brazil.

MB1 has been designed from the drawing board to a final product 100% within Teledyne Marine to meet the growing needs of hydrographic professionals who are looking for a low-cost shallow-water multibeam echo sounder. MB1 delivers the same performance and features as high end multibeam systems but with newer technology in a compact and affordable package.
