

# MILSpec Echo Sounder Launched

Seafloor Systems has introduced the SonarMite MILSpec Echo Sounder. The SonarMite features a field-proven survey-grade echo sounder, bluetooth technology with Windows Pocket PC devices, smart transducer design with QA output and an internal rechargeable battery.

The SonarMite is a result of nearly two years' research and development to further extend the boundaries of shallow-water hydrographic surveying equipment. The release of the SonarMite instrument marks the next stage introducing a series of equipment designed around the WinSTRUMENT concept using the latest portable computer integrated with new measurement technologies.
