

# MMT to Celebrate 40 Years in Marine Survey

MMT celebrates 40 years in the marine survey business this year and the celebration starts at Oceanology International, stand F601, at London ExCel, from 15-17 March 2016. MMT will showcase its latest developments and results on the ultra-efficient Surveyor Interceptor ROV. After a period with intense research and development work, MMT launched the Surveyor Interceptor survey ROV (SROV) in 2015, combining extremely high resolution and performance with substantial cost savings.

An increased expansion of offshore installations has required a new and innovative approach to UXO detection, excavation, verification and clearance. Through intense R&D work with new survey methods to optimise the target identification, MMT is today a preferred supplier for UXO surveys to many high-end clients within the renewable energy

and oil and gas sector. In 2015 MMT performed four successful UXO projects with their geophysical and UXO surveys combined with proven equipment and data processing. MMT has gained extensive experience in searching for ammunition and mines through a long work history in the Baltic Sea and the North Sea over the past 40 years.

Daily presentations will be made on stand F601 as follows:

- 11 am Reporting counts! - Geotechnical, marine geology, data processing and reporting. Looking for cost-savings? MMT delivers! (Håkan Sundin, Geotechnical Manager, Therese Sundberg, Geology Manager, Lars Persson, Data Processing Manager)
- 2 pm From possible minefield to ALARP certification! – UXO surveys & disposal (Erik Uvebrant, Operational Survey Manager, Nils Ingvarson, CCO)
- 4 pm Surveyor Interceptor ROV (SROV): High resolution – High efficiency; the new generation survey! (Audun Brandtzaeg, MD MMT Norway)

Visitors are welcome to join for a chat, free drink and to meet the sales and tech team.
