

MMT Wins Survey Contract

Marin Mätteknik AB has been granted a survey contract covering about 150km² in Skagerrak, according to IHO S-44 standard for the County Administration of Västtra Gtaland. The contract is to map the area for a planned marine national park, manifesting strong public interest in the results of this survey. The work encompasses both bathymetry and geophysical seabed surface interpretation with backscatter and side-scan sonar. In these vicinities, MMT have recently twice conducted large surveys. In 2000 a pilot project was launch to survey the Kosterfjord from Scken to the islands of Vderarna, covering 144km². The project was performed in joint co-operation with Vsttra Gtaland County Administration and Tjrn Marine Biological Laboratory, a so-called Centre of Excellence governed by the Universities of Gtteborg and Stockholm. In 2003 a survey took place in the northern Swedish part of the Skagerrak, under contract to the National Board of Fisheries and the Swedish Navy.
