

# Monitoring Dover Tides and Weather

A tide and weather monitoring system which will further enhance the efficiency of shipping movements into the Port of Dover, UK - one of the world's busiest harbours - has been provided by Seatronics Ltd, UK. The new system has UHF telemetry link integrating it with Dover Harbour's LAN to ensure that up-to-date tide and weather information is available throughout the harbour. The applications are many. Valeport Ltd, UK, worked with Seatronics and the Marine Operations and IT Departments of Dover Harbour Board to design, manufacture and install the tide and weather monitoring system.
