

Motion Solution for Marine Applications

Coda Octopus and Hemisphere GNSS introduced integrated position, heading and attitude solutions for marine-based applications. Designed in a compact form factor for rapid deployment, the F175-H solution combines Hemisphere Global Navigation Satellite System (GNSS) receivers and Coda Octopus inertial technology.

By tightly coupling the raw GNSS outputs from the Hemisphere VS GNSS receiver with the high-grade Inertial Measurement Unit (IMU) from Coda Octopus, the F175-H delivers outstanding performance at an affordable price for a host of marine applications including imaging, mapping, security, construction and survey.
