

N-Sea Expands into French Offshore Wind Industry

Subsea IMR provider, N-Sea, has signed a letter of intent with CERES Recherches & Expertise Sous-Marine and TechSub Industrie Environnement, to provide subsea survey, installation and remediation services to the French offshore wind industry. The partnership will also include the provision of unexploded ordnance (UXO) detection, identification and removal services and will allow all three companies to utilise their international experience, vessels and specialised equipment.

Gerard Keser, CEO of N-Sea, said that N-Sea has developed a strong track record in UXO management, construction support and IMR services in the offshore renewables market. Together with CERES and TechSub, he is convinced N-Sea will be best placed to help developers and contractors understand and deal with the risks of the installation of a

power grid and windfarm foundations on the seabed.

The agreement was signed at the Dutch Trade Mission on 11 March 2016 in Paris and was witnessed by Ministry officials and the King and Queen of the Netherlands.
