

# NavCom GPS Supported by FieldWorks Software

NavCom Technology, Inc. high-precision StarFire and Real Time Kinematic (RTK) GPS receivers are now fully supported by XYZworks FieldWorks field data collection software.

StarFire receivers provide the decimeter accuracy of the satellite-based StarFire GPS augmentation network on a world-wide basis, without the need for local base stations. FieldWorks data collection software operates on PocketPCs using the Windows CE operating system, an easy-to-learn and use program that integrates with PocketCAD and is loaded with features for land surveying and construction applications.
