

Navi-Sailor ECDIS to 25 Newbuilt Vessels

Transas Europe GmbH has supplied its Navi-Sailor ECDIS sets for Columbia Ship Management. After thorough negotiations, the companies reached an agreement for Transas to fit 25 newbuilt vessels with its state-of-the-art Electronic Chart System.

11 vessels are being constructed at Aker MTW Shipyard Wismar (Germany) and 14 vessels are being built at GWS Guangzhou Wenchong Shipyard (China). The CSM vessels deploy the ECS system fully prepared with hardware for ECDIS operation. The installation set consists of one 23" TFT-ECDIS workstation in the Navigation Console and one 19" TFT-ECDIS desktop workstation at the Chart table, with LAN-interconnection between both stations. All ECDIS-required sensor interfaces are connected to both stations independently for redundancy. Transas also supplies its TX-97 world chart folio for each vessel.

The selected hardware configuration will allow easy upgrade to full Dual ECDIS system in the future, when official ENC's are available with suitable coverage for paperless navigation.
